

Not in your average attorney's briefcase

But then, our firm has never been average. Take for instance the use of high-technology in the courtroom.

In 1993 our firm was the first to use interactive laser-disks and bar-coded exhibits in a construction defect case. When the defense attorneys walked into the courtroom on the opening day of the Del Coronado Townhomes Association v. LAR Development/D.G. & Associates trial, they saw three things never seen before in a San Diego courtroom — one attorney from our firm, a bank of three laser disk players and a cluster of four televisions.

Six weeks later they saw red when the jury returned a multi-million dollar judgement for our clients. After the trial, one juror described our dazzling multi-media presentation of the evidence against the developer as "...you mowed their lawn with a cruise missile."

Our innovative, first time use of high technology has led to shortened trials, which reduces costs. And cutting trial costs means that our clients get more for repairs.

At Thorsnes, Bartolotta, McGuire & Padilla we work hard to stay above average and ahead of the game.
